

Technical Skills

Android - Jetpack Compose, ViewModel, LiveData, Room, WorkManager, Dagger Hilt, Coroutines & Flows, Retrofit, OkHttp, Proguard

Architecture - MVVM, Clean Architecture, Offline-First, Modular design

Cross-platform - Flutter (modular Android integration), React Native

Tooling & Ops - Git, GitHub Actions, CI/CD, Grafana, Loki, Firebase (Crashlytics, Remote Config, App Distribution), Play Store Publishing

Languages - Kotlin (primary), Java, Dart, TypeScript

Professional Ethos

Android Engineer focused on building scalable, production-grade Android systems with emphasis on architecture, operational stability, and maintainable engineering practices with effective remote-collaboration with multiple remote teams.

Experience

Digii (formerly CollPoll), Remote - Product Engineer 3

2023 - Present

- Drove crash-free session rate from 97.4% to 99.92% by systematically identifying and resolving memory leaks, race conditions, and lifecycle issues across modules.
- Resolved a 45 GB storage accumulation issue by migrating uploads/previews to cache directories with bounded caching and automated cleanup, reducing storage to ~400 MB (99% reduction).
- Owned and built the mobile observability platform using Grafana and Loki with centralising, batching, and PII-redacting logs that result in cutting debugging time by 50%
- Hardened authentication by migrating token storage to EncryptedSharedPreferences and instrumenting involuntary logout tracking via Loki.
- Led the migration to **Jetpack Compose**, reducing feature development time by 20% while improving support for low-end and older Android devices.
- Architected the modular Flutter integration within the Android ecosystem and developed CI/CD workflows to manage it, ensuring consistent builds and faster feedback cycles..
- Collaborated across remote teams to ship UX improvements for 500k+ active users, contributing to a 4.5-star Play Store rating.

Dozee, Bangalore - Software Engineer 2

2021 - 2023

- Designed and built an ECG Android app from scratch with offline-first sync for medical professionals operating under unreliable network conditions.
- Engineered multithreaded Bluetooth communication using Coroutines and MVVM, achieving a 99% connection success rate in a medical environment.
- Reduced mobile data consumption by 2-4 MB per session through optimised REST API integration with local Room database caching and sync.
- Identified and fixed rendering bottlenecks in chart components, reducing load time by up to 3 seconds for charts rendering 1000+ data points.
- Achieved 70%+ unit and integration test coverage using mocking frameworks, establishing a testing baseline for the team.

Education

Jain University, Karnataka

2017 - 2021

Bachelor of Technology - Computer Science - CGPA - 8.5

Interests

Mixed Martial Arts (MMA) - The art of control, precision, & understanding both strength and restraint.

Personal Investing - A study of discipline, pattern, and the quiet thrill of foresight.
